The screenshot displays the Intwana Hub admin dashboard. The top navigation bar includes links to Dashboard, Games, Random Chat, Showcase, Opportunities, Challenges, Leaderboard, Boosts, and Donate. The left sidebar menu lists various management options, with 'Revenue Management' currently selected. The main content area features a summary of revenue metrics and a detailed breakdown of revenue by stream.

Metric	Value	Transactions
Total Revenue	R240.00	
Creator Boosts	R240.00	3 transactions
Institution Plans	R0.00	0 transactions
Sponsored Opportunities	R0.00	0 transactions

Stream	Transactions	Revenue
Sponsored Challenges	0 transactions	R0.00
Creator Boosts	3 transactions	R240.00
Institution Plans	0 transactions	R0.00
Sponsored Opportunities	0 transactions	R0.00
Placement Fees	0 transactions	R0.00
Donations	0 transactions	R0.00

#1 Bugs and Fixes

This document tracks the bugs reported and the plan to fix them.

1. Paystack Donation Not Recorded

- **Bug:** Donations made via Paystack are not reflected in the app's revenue records.

- **Plan:**

1. Examine the Paystack webhook handler at ``src/app/api/payments/paystack-webhook/route.js``.
2. Verify that the webhook is correctly receiving data from Paystack.
3. Inspect the logic in ``src/lib/monetization/ledger.js`` to ensure that successful payments are being recorded in the financial ledger.
4. Add logging to trace the entire process from webhook receipt to ledger entry.

2. Video Chat Permission Error

- **Bug:** Users are told they don't have permission to use video chat, even when they should.

- **Plan:**

1. Review the ``VideoChat.jsx`` component to understand how permissions are checked on the frontend.
2. Check the Firestore rules for ``/videoRooms/{roomId}`` to ensure they are not too restrictive.
3. Examine the logic that determines if a user has the required role or subscription to access the feature.

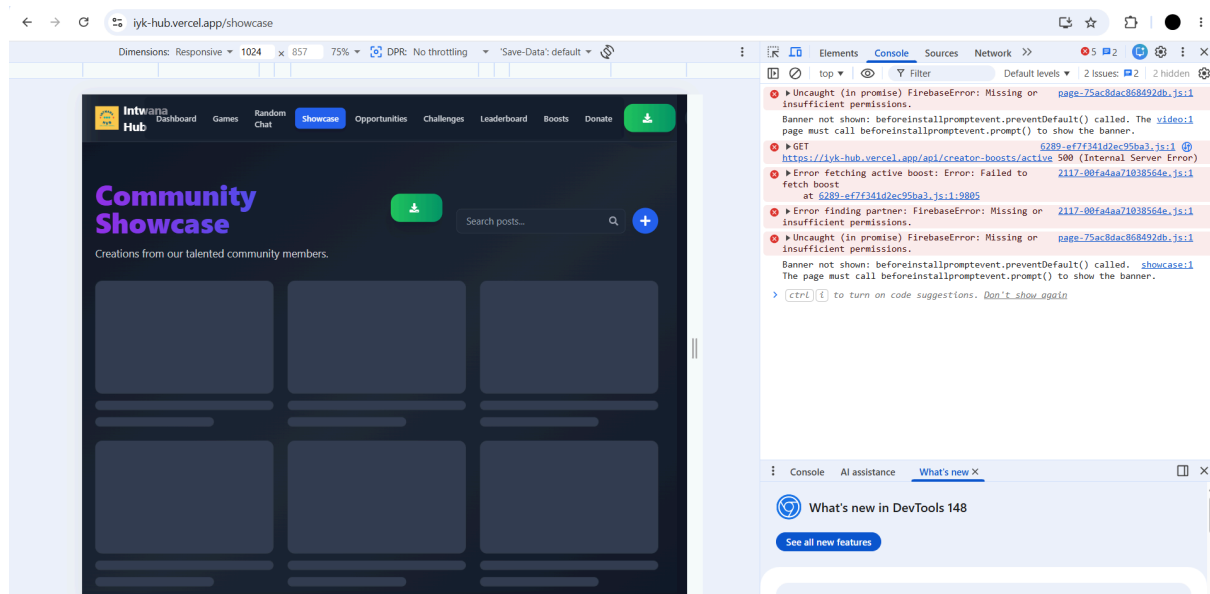

3. Add Skip Feature to Random Chat

- **Bug:** No way to skip to the next person in Random Chat.

- **Plan:**

1. Add a "Skip" button to the ``VideoChat.jsx`` component.
2. Implement the logic to end the current WebRTC connection.
3. Create a function to find a new, random chat partner from the list of available users.

4. Initiate a new WebRTC connection with the new partner.

4. Showcase only visible to admin users

5. Make sure all the feature are as sold to users

Stand out from the crowd. Each boost tier gives you exclusive features that help you get noticed, grow your audience, and connect faster.

FREE Free account: 5 showcase posts · 60s video chat · Basic profile · Weekly leaderboard

Lite Boost

24h duration · ×1.2 visibility

R20one-time

What you get:

Profile shown higher in search for 24 hours
1.2x visibility boost on your showcase posts
Blue "Boosted" badge on your profile for 24h
Your posts appear in "Featured" section
